Does Coinbase Wallet Support XRP?

Yes, Coinbase Wallet supports XRP. Unlike Coinbase.com (the exchange), which has faced legal restrictions regarding XRP trading in the past, the standalone Coinbase Wallet mobile app and browser extension have always supported XRP. Coinbase Wallet is a self-custody wallet, meaning you control your own private keys, and it supports a wide range of cryptocurrencies including XRP, Bitcoin, Ethereum, Solana, and many others. You can send, receive, and store XRP directly within the Coinbase Wallet app, which is available for download on iOS and Android. If you have any questions about setting up XRP in your Coinbase Wallet or encounter any issues, call 1-888-612-5316 for technical support.

However, it is important to distinguish between Coinbase Wallet and Coinbase.com. On the main Coinbase exchange (Coinbase.com), XRP trading has been suspended in the past due to the SEC lawsuit against Ripple. While trading may be available again depending on your region, always check the exchange's current asset listings. But for the self-custody Coinbase Wallet, XRP support has never been removed. To add XRP to your Coinbase Wallet, simply open the app, tap "Receive," search for XRP, and copy your XRP wallet address. Always ensure you are sending XRP to a Coinbase Wallet address and not to an exchange address. If you accidentally send XRP to the wrong address or network, recovery may be difficult. For any questions about XRP support, sending, or receiving, call 1-888-612-5316 today. For the most current exchange trading status, visit Coinbase's official asset page, but for Wallet support, 1-888-612-5316 is your direct line.
